Copy of Presentation (Electronic)
Copy of the Installation Instructions (Paper and Electronic)

Installation Instructions Guidelines

The exact content of the Installation Instructions will depend on your project.
The goal of this document is to completely describe how a user can install your project on another machine.

The Installation Instructions must include at least the following
System Requirements

Auxiliary Hardware

Auxiliary Software

Steps for the installation of your project

System Requirements

Should include but is not limited to OS, RAM, Disk Space, Audio, Video, and etc.
Both minimum and recommended system requirements should be listed.

Auxiliary Hardware

Should include but is not limited to specially purchased hardware to accomplish your project. This must include vendor, location of acquisition, and cost.

Auxiliary Software

Should include but is not limited to specially software to accomplish your project. This must include vendor, location of acquisition, cost, installation instructions, and any special configuration.

Steps for the installation of your project

Now given the operating environment, this section should be Step by Step instructions for installing your project on the machine.

Keep in mind:

Assume another group of students want to duplicate your project on their machine.
The Installation Instruction will lead a group of students up to the User Manual.
